

SHUBHAM AGDARI

Frontend-Focused Full Stack Developer

+91-7875820028 @ shubham.agdari@gmail.com LinkedIn | Portfolio | GitHub Gurugram, Haryana, India

SUMMARY

I am a Frontend-Focused Full Stack Developer with over 4 years of experience in building scalable SaaS platforms and interactive consumer applications. My expertise in React, Next.js, TypeScript, and Node.js enables me to build high-performance applications, enhance user engagement, and improve delivery efficiency. I thrive in both startup and enterprise environments and continuously seek to optimize performance through optimized development workflows.

SKILLS

React	Next.js	TypeScript	Tailwind CSS	TanStack Query	CSS	Node.js	PostgreSQL	MongoDB		
JavaScript	ES6+	SQL	HTML	Redux Toolkit	React Hooks	CSR	SPA	REST	Express.js	JWT
Vercel	Docker	Linux	Git	Unit Testing	Integration Testing	Agile	Framer Motion	Shadcn		
Authentication & Authorization			DigitalOcean	Webpack	Vite					

EXPERIENCE

11/2025 - Present	Software Development Engineer
Gurugram, India	Wantace A technology company focusing on rapid MVP Development. - Architected and delivered end-to-end SaaS applications, including a label reseller platform and a solar quotation engine, using Next.js, React, Node.js, PostgreSQL, and REST APIs. - Designed scalable backend services, authentication, and database architecture while building responsive, high-performance user interfaces with modern React and Next.js. - Managed production deployments on Vercel and Linux servers, implementing CI/CD workflows and improving release reliability across multiple client applications. - Increased development velocity by approximately 40% through AI-assisted engineering workflows using Cursor AI, Claude, ChatGPT, and v0.dev, accelerating feature development and debugging. - Reduced development effort by 50% by creating reusable UI components, shared utilities, and standardized full-stack architecture patterns, enabling faster feature delivery and easier maintenance.
03/2023 - 05/2025	Senior Analyst (Frontend Developer)
Pune, India	Capgemini - Developed and optimized enterprise frontend applications using React and TypeScript for global enterprise clients - Reduced UI bug reports by 40% through systematic debugging, performance optimization, and resolution of recurring frontend bottlenecks - Resolved critical production incidents within SLA timelines, ensuring uninterrupted experiences for enterprise users across multiple regions - Collaborated within Agile/Scrum teams on sprint planning, code reviews, retrospectives, and feature delivery initiatives
08/2021 - 03/2023	Analyst (Application Support Engineer)
Mumbai, India	Capgemini - Maintained and supported Windows-based enterprise applications within RDS environments for global clients - Resolved 50+ high-priority infrastructure and application incidents across enterprise engagements - Reduced recurring incident rates by 25% through root-cause analysis and application performance optimization initiatives

EDUCATION

08/2017 - 06/2021	Bachelor of Engineering
Nagpur, India	G.H. Rasoni College of Engineering

PROJECTS

Label Flow — Label Reseller SaaS Platform

Label Flow is a SaaS platform designed for label resellers

- Engineered a white-label SaaS platform enabling resellers to manage label orders, upload artwork, and track shipment status through a centralized dashboard
- Implemented secure multi-tenant workflows using Supabase row-level security and real-time synchronization
- Reduced manual order processing overhead by approximately 70% after deployment

Solar — Solar Quotation SaaS Platform

Solar is a comprehensive platform for solar quotation management

- Designed and launched a full-stack solar quotation platform enabling installers to configure panel counts, roof types, and tariffs for instant branded PDF generation
- Implemented role-based access control and scalable multi-tenant architecture using PostgreSQL
- Reduced quotation generation time from 30 minutes to under 2 minutes for end users
